Assignment #6: Web scraping

2.   3. Wordcloud in R is a useful tool for organising data. To begin with, the text data may be converted into a data frame for visualisation. The text data in paragraphs may then be read and analysed using the funcLon "htmlTreeParse." After that, a corpus for preprocessing may be generated, and extra characters, such as punctuation marks, can be eliminated from the data frame. Finally, the data frame may be arranged by frequency, repeLLon, etc. using Wordcloud.
3.
4.   4. Challenge: Using Python, one may download several files and organise downloaded material into folders. To find out which files, if any, had trouble downloading, one can utilise a download function and contact a module called "requests."
